Shreeshail Chavan

Software Engineer (Backend / Full-Stack) · Pune, India · Open to relocation
+91 9146473170 | shreeshailchavan309@gmail.com | linkedin.com/in/shreeshail-chavan | github.com/shreeshailchavan

SUMMARY

Backend and full-stack engineer who has shipped 0-to-1 products at three startups, from design through AWS deployment. Cut API latency 50–70% on a production SQL system and led delivery of 110+ REST endpoints.

EDUCATION

Pune Institute of Computer Technology (PICT) | B.E., Electronics & Telecommunication · CGPA 8.57/10 *2024 – 2027 (expected)*
Government Polytechnic Kolhapur | Diploma in Information Technology · 95.5% *2021 – 2024*

EXPERIENCE

Rakuten Group, Inc. Tokyo, Japan
Associate Applications Engineer (full-time offer, Technology Platforms) *Starts Oct 2027*

Kreated.store Pune, India
Founding Engineer Intern *Jun 2026 – Present*

- Own features end to end across Next.js and Node.js/TypeScript services, shipping weekly against PRDs with design and product.
- Designed MongoDB schemas and the auth layer: Firebase phone auth, Google OAuth 2.0 and reCAPTCHA.
- Built Playwright unit and e2e suites with every feature and tested AWS paths locally with LocalStack for regression-free releases.
- Run AI-assisted development with review gates: plans approved before code and generated tests as acceptance criteria.

NixOut London, UK (remote)
Software Engineer Intern *Jan 2026 – Apr 2026*

- Designed and shipped a CRM from 0 to 1, owning architecture, backend and AWS (EC2, S3, CloudFront, Amplify, SES).
- Built session-authenticated REST APIs; tuned SQL indexes, CDN caching and assets to cut page load 40–60%.

iGAP Technologies Kolhapur, India
Full-Stack Engineer & Team Lead *Dec 2023 – Apr 2024*

- Led delivery of 110+ REST endpoints (about 80% of the backend) and an RBAC layer that blocked all unauthorized access.
- Cut API response time 50–70% on a production SQL datastore by rewriting slow queries and removing redundant calls.

PROJECTS

NailStore: Multi-Tenant Storefront Platform for Nail Artists | *Next.js, NestJS, PostgreSQL, Redis/BullMQ, Clerk, Turborepo* 2026

- Built a link-in-bio storefront platform where nail artists sell press-on sets and take custom orders: Next.js App Router storefronts with on-demand ISR over a NestJS modular-monolith API and Postgres.
- Isolated tenants by construction with artist_id on every tenant table and Postgres row-level security under a non-owner app role, so a data leak needs two independent bugs.
- Kept slow work off the request path with a transactional outbox feeding BullMQ workers and idempotency keys on every create; an OpenAPI spec generates the typed client in a Turborepo monorepo.
- Documented 15 architecture decisions and a capacity model (500 to 50,000 artists; about 231 req/s peak origin load at a 95% edge-cache hit rate). Stripe Connect payments and the vision sizing service are in progress.
  Docs: Architecture case study · Backend design · Frontend design

RouteMem: OpenAI-Compatible LLM Gateway | *Python, FastAPI, Redis, Qdrant, Docker, AWS* 2026

- Designed an async FastAPI gateway that OpenAI SDK clients adopt with one line, streaming over SSE from local and cloud models.
- Built a session-scoped tiered cache (Redis exact match 0.66 ms, Qdrant similarity 12.4 ms) with zero cross-session leakage.
- Wrote a router that picks a backend by cost, latency SLA and privacy rules in under 5 ms, cutting spend 80% vs. all-GPT-4o on a 100-query benchmark; deployed with Docker on AWS EC2.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++, SQL
Backend: Node.js, NestJS, Express, FastAPI, asyncio, Flask, REST, OpenAPI, SSE, OAuth 2.0, Clerk, RBAC, idempotency keys
Frontend: React, Next.js (App Router, ISR), zod
Data: PostgreSQL (row-level security), MySQL, MongoDB, Redis, BullMQ, Qdrant, SQLite, query optimization and indexing
Cloud, DevOps and testing: AWS (EC2, S3, CloudFront, SES, RDS), Vercel, Docker, pnpm/Turborepo, LocalStack, Git, Playwright
AI tooling: Claude, Google Antigravity, MCP, OpenAI-compatible APIs, Ollama, Groq, spec-driven agentic development
CS fundamentals: DSA, system design, OOP, DBMS, operating systems, computer networks

ACHIEVEMENTS

- Solved 900+ problems across LeetCode, CodeChef and GeeksforGeeks (LeetCode max rating 1735); 3× hackathon winner.
- Co-authored a peer-reviewed paper on malicious URL detection, Scientific Culture (2025). Paper
